

## Global Specialist Energy Recruitment firm, EarthStream sees a bright future in Japan

23 July 2013, Tokyo - Global specialist Energy Recruitment firm EarthStream has recently launched an office in Japan, its 12<sup>th</sup> country, in response to the huge growth in the clean energy sector partly due to the government's Feed in Tariff policy. With the country looking to replace the power supplied by Nuclear, there will be huge growth in all forms of alternative energy production and the associated job opportunities.

EarthStream Japan's Managing Director Sean Travers comments "almost 40% of our Global Energy clients are looking to expand their business in Japan and they will be relying on EarthStream's Global Energy expertise to assist them as there is a real shortage of energy specialists in Japan. As a specialist Global Energy Recruiting firm we have a distinct advantage in Japan as we are able to leverage our accumulated global Energy experience and knowledge in not only assisting our clients on their current hiring needs, but to play a proactive advisory role in partnering with them for their future headcount plans within the Energy lifecycle."

EarthStream not only works within the clean energy business but also with power generation and oil & gas companies, and as Japan needs to change its energy mix, is optimistic that there will be many opportunities across the whole energy lifecycle.

Adds Travers "Japan will be a huge growth market for EarthStream and we predict that due to the demand increases for specialized energy professionals this will in turn result in significant salary increases across the board especially within key technical areas such as electrical and civil engineering".

EarthStream is headquartered in London and has based its Japan operation in the Marunouchi Trust Tower.
